SUMMARY

Product designer with a background that started outside tech. For nine years I designed and helped bring 1,400+ products to market in fashion, working from research and concept through samples and mass production. After a career change into UI/UX, I joined DM Solutions in April 2025 and have been the sole designer on hubstep, an in-house SaaS CRM that grew from a direct-mail tool into a sales platform, since July 2025, covering product UI/UX, the Design System, and product communication.

EXPERIENCE

DM Solutions — UI/UX Designer, Product Development

Apr 2025 – Present

hubstep, an in-house SaaS CRM expanding from direct mail (DM) into sales force automation (SFA). Worked with a senior web designer until July 2025, then as the team's sole designer, alongside the PdM, Engineering, and Sales.

- Joined mid-development, inheriting the existing screens and Design System and improving UI/UX in parallel with implementation.
- While SFA requirements were still shifting, mapped them into system-level flows and high-fidelity prototypes that became a shared reference for the PdM, Engineering, and sales-domain members, defining the experience for the first SFA release.
- Organized roughly 500 pieces of real-world feedback, presented multiple design options for the PdM to decide on, and coordinated implementation with Engineering.
- Redesigned the address-list confirmation flow into a status-based tab UI, designing states and branches as well as screens; sales users who had raised the issue reported they could work through it without hesitation.
- Restructured List Upload from three steps that mixed operations, checks, and settings into five steps with a single, clear purpose each.
- Redefined the roles of Home and Sales Report and the navigation between them, using journeys for sales reps and sales managers.
- Proposed bringing familiar DM work directly into the SFA Home for existing DM users; the direction was adopted and rolled out in stages.
- Designed UI/UX for multiple provision formats, including Classic mode for migrating legacy users without breaking their existing workflow.
- Extended the Design System with new variants, new components, and usage rules.
- Designed the structure, copy direction, and visuals of the hubstep Lite LP, then adapted it into one-page sales collateral.

185	~2 months	28	14	3
pages & modal states designed (91 pages · 94 modal states)	estimated design time saved, according to the PdM	post-release improvement items addressed	UX/UI issues I found myself, with improvement proposals	workflow-level UX improvements and early-stage issue framings

28, 14 and 3 are from my first-half performance review. I took the managed-account selection screen and the call-case list-add UI to the PdM and Engineering myself, which led to concrete improvement work.

Freedom Tax Japan — UI/UX Design Intern

Oct 2024 – Mar 2025

B2C tax service redesign, working in English with a senior designer and the founder.

- Reviewed 15 competing services and mapped their user flows to understand how tax-related services communicated value, built trust, and guided users toward the next step.
- Identified two key issues from the research and planned and ran a team brainstorm to improve the landing page.
- Designed wireframes and UI in Figma; three of my proposed layout and UI ideas were adopted in the new landing page, launched before the 2025 tax season.
- Ran four moderated usability testing sessions and reported the findings.

Graniph — Fashion Designer (all genres)

May 2021 – Mar 2025

On leave from April 2024 to March 2025 for a career change into UI/UX design.

- Handled an average of two collections (about 18 styles) a month, bringing about 630 styles to market over roughly 35 months (May 2021 – Mar 2024); about 10% of seasonal items were selected as year-round items.
- Yoshitaka Amano collaboration: 70% of my designs sold through more than 50% of their inventory in the first week; the red dress sold through 54.2% in its first week.
- Worked with in-house graphic designers and licensors across the full product cycle, from competitive research and ideation to purchase orders, sample checks, wear testing, and refinement.

Ikegami — Women's Apparel Designer (ODM)

Sep 2020 – May 2021

- Planned and designed mail-order womenswear for retail clients, from market research and line maps to fabric selection, sewing specs, factory instructions, and sample checks.
- Each quarter, proposed about 25 line maps and 10 samples per client catalog, with 2–3 styles selected per catalog; about 5 styles went to production at 2,000+ units each, with best sellers at 5,000+ units.

Outsourcing Technology

Apr 2020 – Sep 2020

Completed training in Java, the Spring framework, and XHTML/CSS; left with few opportunities for hands-on work due to COVID-19.

Familiar — Kids' Wear Designer

Apr 2015 – Apr 2020

- Designed 55–70 apparel and 20–25 accessory styles per half-season across two lines (School, 120–160 cm; Toddler, 80–120 cm), from research and concept to fabric selection, pattern direction, sample checks, and trade shows.
- 2019: basic School items averaged 75%+ sell-through (target 65%); a new Toddler item reached 96%.
- Aug 2018 – Sep 2019: managed design and merchandising, in English, for licensed products sold in Taiwan.
- Served as Tokyo design lead coordinating with the Kobe headquarters design team; School line team leader from September 2019.

EDUCATION

Tokyo Zokei University, Graduate School — Master's, Design (textile design), 2015
Tokyo Zokei University — Bachelor's, Design (textile design), 2013

CERTIFICATION

Google UX Design Professional Certificate, 2025

SKILLS

UI design, information architecture, workflow design, prototyping, design systems, UX research, usability testing, landing page & sales collateral design, branding

TOOLS & LANGUAGES

Figma, Illustrator, Photoshop, Miro, Notion, Studio
Japanese (native) · English (professional working use)
